

**Grundfos UP Circulator Pumps**

Grundfos circulators are single-stage, direct-drive centrifugal pumps. The wet rotor design eliminates the need for routine maintenance and lubrication. Available with cast iron, stainless steel and bronze volutes, Grundfos circulators are designed for domestic and light commercial applications in open and closed systems. These pumps can be operated up to system pressures of 145 PSI with maximum fluid temperatures of 230° F.

**Grundfos UP15-29SU**  
Open System Circulator Pump

**Grundfos UP26-64F**  
Closed System Circulator Pump

**Grundfos “Comfort System” Retrofit Kit**

The Comfort System uses a patented Comfort valve and pump to provide instant availability of hot water at the point of use. The Comfort valve is installed at the furthest fixture from the hot-water tank. With a built-in timer, the pump allows hot water to circulate along the loop through the valve using the cold-water side as a return line. As the temperature rises to 100°F, the valve closes directing hot water to the tap, resulting in a constant availability of hot water. The Comfort system saves up to 16,000 gallons of water per year and per household (based on average modern household usage) and uses less energy than a 25 watt light bulb.

**System Includes:**

- UP15-10SU7P Pump
- Power Cord
- Timer
- Check Valve
- Comfort Valve
- (2) ½" X 12" Line Cord FNPT Flex Hoses
