

**Myers Regulating Valves**

**17527B3 Regulator Valve**

**19280C Unloader Valve**

Accurate, adjustable regulators maintain constant system operation pressure, protect pumps from excess pressure, and thus reduce maintenance and down time.

Unloaders reduce pump maintenance and power consumption; maintain constant pressure when system is in operation; eliminate bypass cooling; and extend life of entire pump. When flow is shut off, the unloader automatically reduces pump pressure to nearly inlet pressure thus unloading the pump.
