

Midland # 652 Brass Lined Deep Well Cylinders

The #652 cylinders are heavy duty deep well cylinders made with a seamless brass tube that lines a standard schedule 40 galvanized pipe. These open top cylinders are available in your choice of solid bronze ball valves or spool poppet type valves with either 3 or 4 leathers on the plunger. Plungers are tapped so they can screw onto the check valve for easy removal. Longer strokes are available upon request.
