

**Rel-Pac®  
Natural Cellulosic Polymer**

**Description:**

Rel-Pac® is a non-fermenting granular polymer designed for building a low solids drilling fluid with increased borehole stability. Rel-Pac® is a highly dispersible polymer, which prevents the formation of hard lumps or fish eyes, for maximum product efficiency.

**Recommended Use:**

Rel-Pac® is designed to increase borehole stability in a variety of rotary and horizontal drilling applications.

**Characteristics:**

- Highly dispersible.
- Controls filtration rate and assists in forming thinner, less permeable filter cake.
- Improves fluid viscosity for effective removal of drill cuttings.
- Encapsulates solids for a total lower solids system.
- Stabilizes drilled formations.
- May be used in fresh or salt water conditions.

**Mixing and Applications:**

Mix at low shear through a mud hopper to avoid lumping and to minimize waste. Add 0.5 to 1.5 pounds of Rel-Pac® per 100 gallons of existing bentonite drilling fluid for hole stabilization.

**Packaging:**

2 lb. plastic bags, 25 bags per box; 50-lb bags, 40 bags per pallet.

**Drill-Terge™  
Drilling  
Detergent/Wetting  
Agent**

**Description:**

Drill-Terge™ is a liquid solution of nonionic surfactants formulated to increase detergency and wetting properties of drilling fluids.

**Recommended Use:**

Designed to control interfacial tension and inhibit the hydration and dispersion of clay and shale.

**Characteristics:**

- Reduces torque and drag associated with drilling in swelling clays.
- Assists in keeping the drill bit clean and prevents bit balling.
- Promotes settling of clays at the reserve pit/tank.
- Designed to work in fresh or salt water.
- Mixes very easily.

**Mixing and Applications:**

Add 2-3 quarts of Drill-Terge™ per 100 gallons of existing bentonite drilling fluid.

**Packaging:**

5-gallon pails, 30 pails per pallet, or 55-gallon drums. All pallets are plastic-wrapped.
